--<sup>1</sup>

After reconstitution with 10 mL of sterile 0.9% Sodium Chloride Injection, one dose (0.5 mL) contains 5 micrograms of Zapomeran, a COVID-19 mRNA (encapsulated in lipid nanoparticles).

Zapomeran is a single-stranded, 5'-capped messenger RNA (mRNA) replicon (self-amplifying mRNA), produced using a cell-free in vitro transcription from the corresponding DNA templates encoding a replicase and the spike glycoprotein of the G clade D614G variant of SARS-CoV-2.
